

Airport Parking Systems Management

Protecting Your Parking System Investment

Once your parking system has been installed, you need a professional service organization to make sure you get the most from your investment. That's what ARINC Managed Services (AMS) provides: a highly trained service team that understands airport IT system integration, support and maintenance better than anyone in the industry.

Keeping Your Parking Access and Revenue Control System Performing

Parking access and revenue and control systems can be a major source of income for airports, and when systems fail, it means lost profits and unhappy customers. The value of knowing IT issues will be resolved quickly and correctly means you're back operating as soon as possible. AMS brings unprecedented experience keeping mission-critical airport systems up and running and costs incurred from downtime as low as possible.

Extending the Life of Your System

As the industry standard for airport IT and telecommunications systems, we provide the same trusted benchmark-quality service outside the airport as we have for decades inside. Our technicians are highly trained and can help you maximize your investment by providing outstanding maintenance and support over the life of the system.

Who better to trust with your parking system than a company that has been intricately involved in critical airport and aviation operations for over 80 years? AMS understands the pivotal challenges of systems integration, IT and telecommunications maintenance, and we have expert technicians at airports around the globe. Why go anywhere else?

AMS keeps your mission-critical PRCs systems up and running.

AMS Parking Systems capabilities include:

- ▶ Parking Access and Revenue Control Systems
- ▶ License Plate Recognition (LPR) systems
 - Proximity Card Reader Systems
 - Automatic Vehicle Identification Systems
 - Space Counting Systems
