

RENTAL

Now, flight information displays can go where your customers do

With microFIDS from ARINC, car rental and shuttle bus providers can easily and affordably deploy up-to-the minute flight, weather and destination information where customers need it most. You'll create a better rental experience for your customers and new revenue opportunities for your business.

In and outside rental offices, in airport shuttles and in parking areas, you can bring flight information directly to your customers from the moment they arrive at your location and all the way to the airport and back.

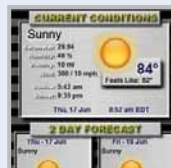

Quick Facts

- ▶ **An easy-to-deploy, low-cost way to create a customer-focused experience**
- ▶ **Fully customizable to display arrivals, departures, news, weather, paid advertising and more**
- ▶ **Integrated GPS technology allows content to be customized to arriving and departing passengers**
- ▶ **2D bar code scanning—passengers can scan a boarding pass or smart phone for instant display of flight information**
- ▶ **Add way finding to help customers get where they need to go quickly and easily**

Transform the shuttle ride

With microFIDS mobile solutions, you can provide useful travel information to your customers inside your airport shuttles. Even better, content is customized for arriving and departing passengers.

Airport-bound shuttle passengers can view up-to-the-minute flight and terminal information. On the return trip, the screen content automatically changes to destination information for arriving passengers, such as local weather, rental information, or paid advertising from area businesses. Integrated GPS technology makes this all possible and it's easily customizable by your rental office staff.

Quick and easy deployment

Wireless, compact and available in a wide range of wall/desk mounted, standalone or mobile vehicle screen sizes, microFIDS give customers the status of their flights and more. Located at the check in counter, mounted on a wall, or placed on the shuttle bus, microFIDS give your customers valuable information while they are on the go.

- ▶ Runs on low-cost, commercial off the shelf (COTS) screens as small as 10.4 inches and up to 52" e-posters
- ▶ Web-based and wireless, getting up and running with microFIDS can be as simple as plugging in the power or installing some cabling
- ▶ Rugged outdoor displays can be mounted outside your rental office so customers can get flight information inside or outside your office
- ▶ Customizable, easy-to-manage content
- ▶ Revenue generating opportunities through display ads for your services or third party advertising such as hotels, local attractions and points of interest
- ▶ microFIDS also has real time fleet tracking to assist in vehicle management

Trusted technology from airport experts

microFIDS is technology you can count on backed by a company you can trust. With ARINC's decades of experience providing IT services for the world's busiest airports, you can depend on skilled, responsive and no-nonsense support for your microFIDS systems.
